TAKING the HEAT off your powerful ideas

From sketches on cocktail napkins to detailed CAD drawings, no matter how your powerful idea comes to life Tran-Tec can help turn it into reality.

Since 1971, Tran-Tec has created custom-designed heat sinks, cold plates, and semiconductor coolers for the electronics industry. Tran-Tec specializes in working with clients to design, prototype and manufacture small to medium sized runs. We also have a large selection of our own extrusion profiles to choose from.

You'll get responsive service, sound advice, unmatched quality, quick turnaround and a very competitive price. From custom-created products to our large inventory of extrusions, Tran-Tec will do what it takes to help your hot ideas become cool business builders.

Driven by Customer Need

Tran-Tec is more than a component supplier for our customers, we're a partner. Customer need drives everything we do at Tran-Tec. Our customers' engineers often design a product with a shape and size to fit their equipment and carry the required heat load. Tran-Tec assists in helping resolve design issues and ensuring the part can be manufactured economically.

Many of our customers manufacture high-quality commercial, industrial, military, and medical electronic products, such as power supplies, motor drives, amplifiers and electro surgical equipment. Tran-Tec has established a reputation for making products that help customers produce high-quality, high-performance, extremely reliable equipment.

In addition to heat sinks, Tran-Tec also makes other machined metal and plastic components, including cabinet parts, bezels, coil forms, feed-through bushings, and enclosures, primarily for the electronics industry. We also do anodizing and other aluminum finishing processes for our own products and other companies.
